

Group These Materials!

In this activity the children group the materials on the cards based on their properties.

The cards can be grouped in many ways including:

- Into distinct groups e.g. electrical conductor or electrical insulator
- Into groups using a Venn Diagram e.g. flexible and electrical conductor
- Into a Carroll diagram e.g. electrical conductor/electrical insulator and opaque/not opaque.

The children can decide how to sort the cards, or this can be directed by the teacher.

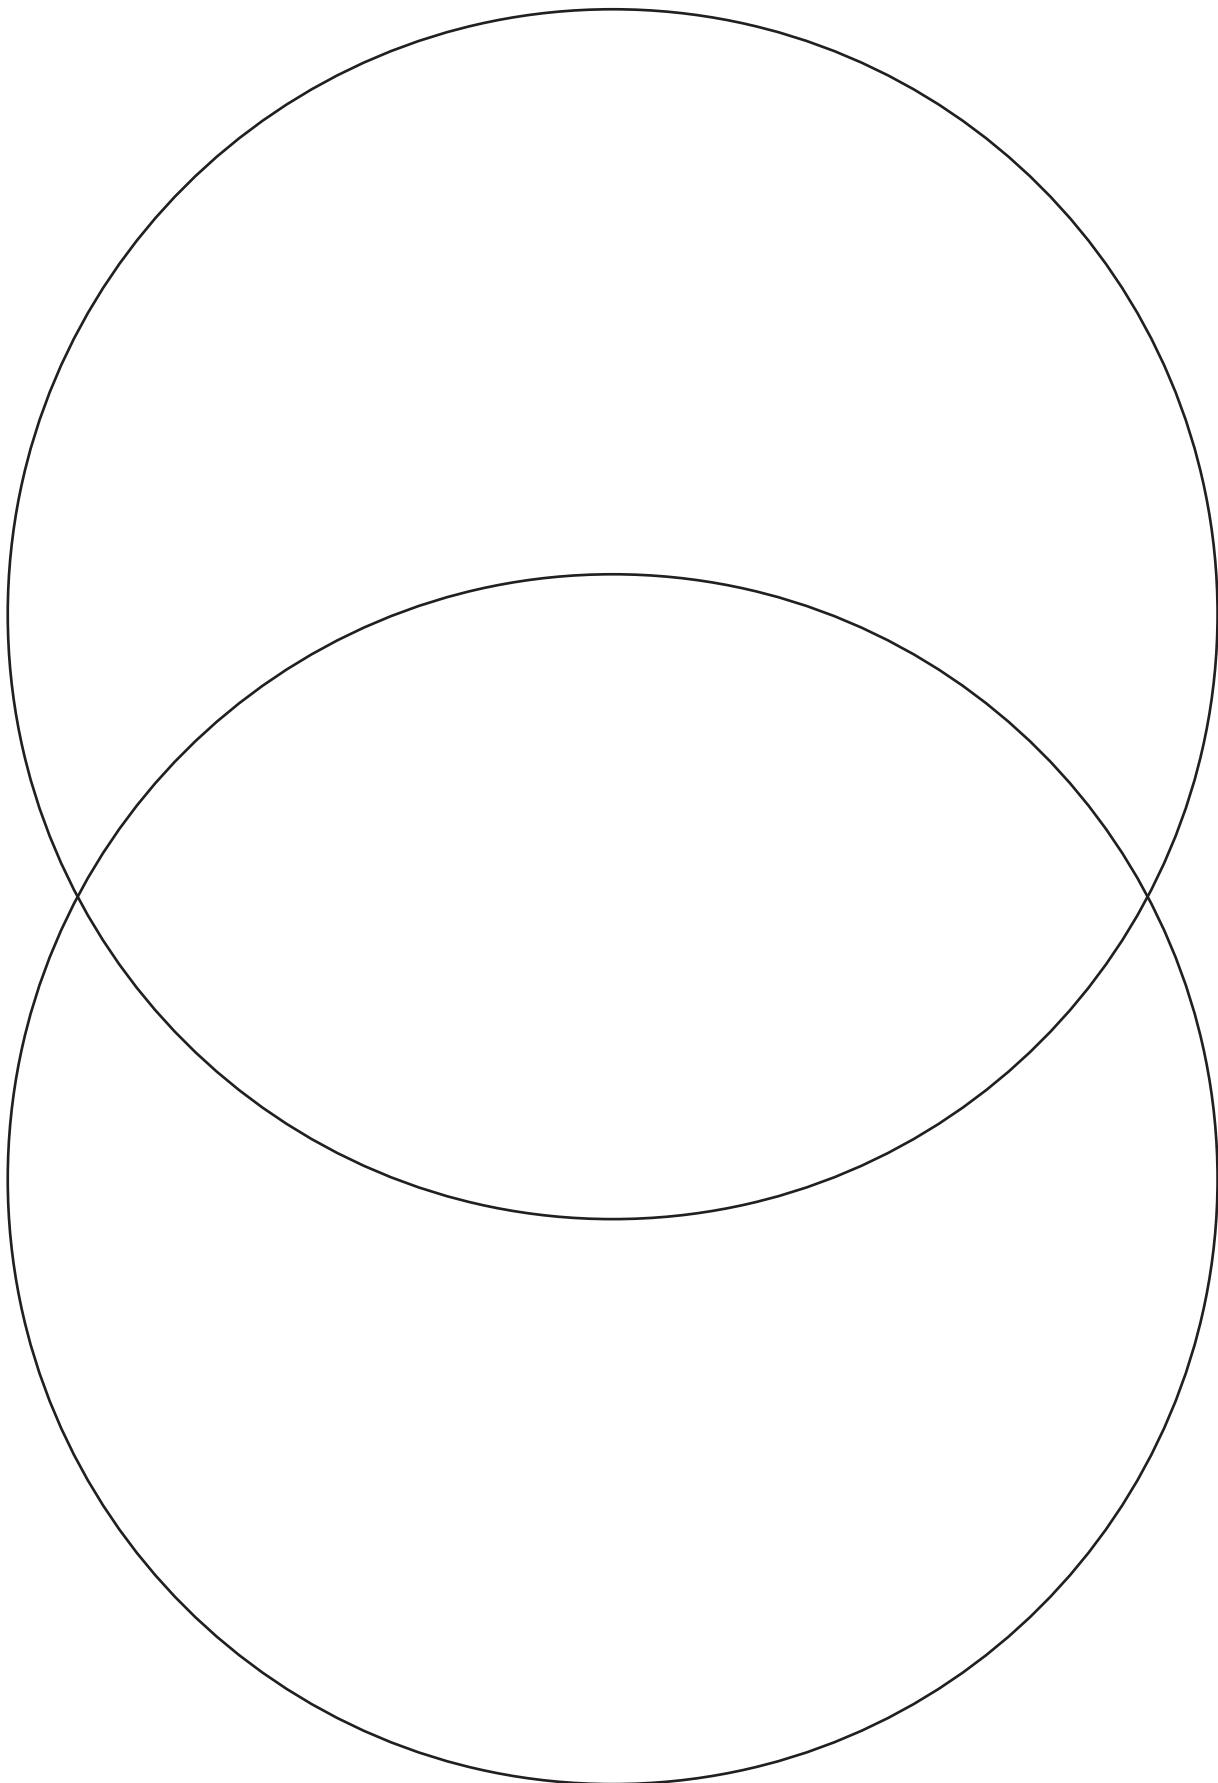

Distinct Groups

Group 1

Group 2

Optional **Group 3**

Venn Diagram

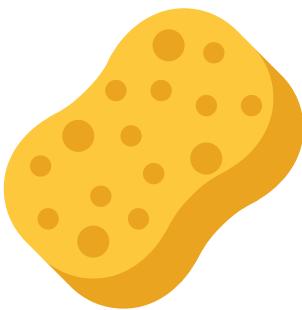

Carroll Diagram

Opaque, electrical and thermal insulator, soft (for rock), rough, rigid, slightly absorbent

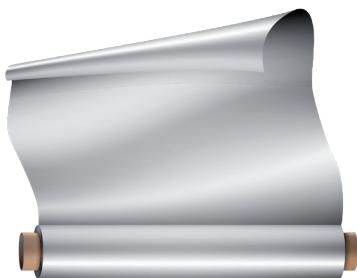

Opaque, electrical and thermal insulator, hard, rigid, rough, waterproof

Opaque, electrical and thermal insulator, absorbent, flexible, soft, slightly rough

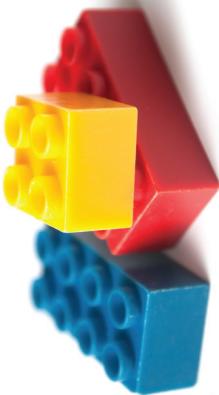

Transparent, flexible, waterproof, electrical and thermal insulator, smooth

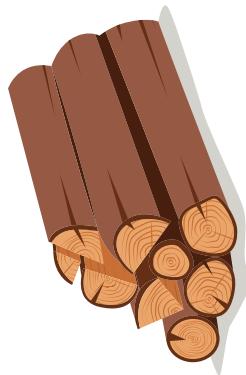

Opaque, electrical and thermal conductor, flexible, smooth, waterproof

Opaque, electrical and thermal conductors, strong, rigid, smooth, waterproof

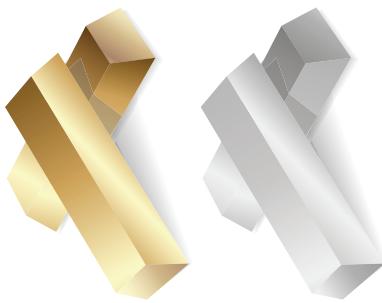

Opaque, electrical and thermal insulator, quite rigid, reasonably strong, hard, waterproof

Opaque, electrical and thermal insulator, slightly flexible, strong, hard, waterproof for a short time – will absorb water if left untreated and in a wet area

Translucent, flexible, absorbent, electrical and thermal insulator, soft

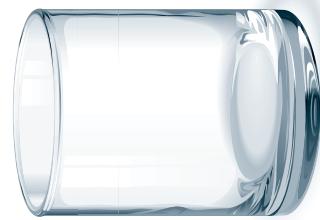

Opaque, electrical and thermal conductor, rigid, smooth, shiny, waterproof

Electrical and thermal insulator, flexible, smooth, waterproof

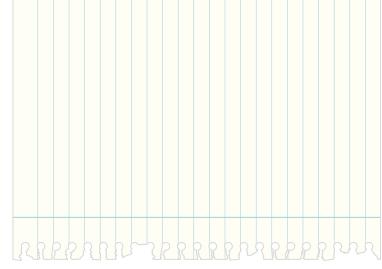

Translucent, electrical and thermal insulator, flexible, soft, smooth, absorbent

Transparent, rigid, waterproof, electrical and thermal insulator, smooth

Transparent, flexible, waterproof, electrical and thermal insulator, smooth

Translucent, flexible, absorbent, electrical and thermal insulator, smooth
